

MAHLE Industrialfiltration is now Filtration Group. For more information, visit www.FiltrationGroup.com

Filter bag amaFlow high efficiency

1. Introduction

For a wide number of filtration applications amaFlow filter bags are a simple, easy to use and economical choice. We supply a wide range of filter bags and bag filter housings.

The absolute rated amaFlow high efficiency filter bags are mainly used for the demanding high end of bag filter applications. Filtration Group bag filters are excellent for use in the filtration of liquids containing higher concentrations of coarse solids. They are particularly beneficial when handling batches of (various) liquids. They are also especially suitable for end filtration or polishing of liquids with extremely low concentrations of solids.

2. Features

- These bags have defined efficiencies (absolute rated).
- Materials used comply with FDA requirements for food and beverage contact and are free of silicones.
- The standard amaFlow filter bags are sized to fit into our baskets and housings, but will also fit into most other housings.

4. Description

- All amaFlow HPM bags incorporate unique graduated layering of media: starting with a built-in pre-filter inner layer and progressing to the tighter microfibre outer layers.
- The particles are systematically removed as fluid travels through multiple layers with each individual layer performing a special function.
- This graduated layering design aids in the prevention of premature blinding which causes unnecessary filter change out.
- All amaFlow HPM filter bags have superior dirt holding capacity.
- The amaFlow SPMF bags have a different layout, starting with a needled felt followed by two microfibre layers.

Types

- The amaFlow HPM bags are high efficiency filter bags.
 All amaFlow HPM filter bags have the unique graduated layering of filtration media. The range comes in four efficiency ranges: 92 %, 95 %, 97% and 99 % and in five micron ratings: 1, 3.5, 5, 10 and 25 μm.
- The amaFlow SPMF microfibre filter bags have an efficiency of 95 % and are available in five micron ratings: 1, 2, 5, 10 and 25 µm.

3. Sealing systems

In order for bag filters to function properly, especially with smaller pore sizes, a good seal between bag and support basket is of great importance. For this reason we have several options:

- The Snap-Collar; a felt-covered metal or plastic ring which clicks neatly into the upper collar of the support basket. The felt serves as the sealing.
- The plastic flange (with handles) which tightly fits into our standard baskets.
- For high efficiency bags also an EPDM seal ring is available to give the best seal (not suitable for top feed (swan neck) housings

5. Temperature and chemical resistance

Filter bag grade	HPM/SPMF polypropylene			
Max. temperature [°C]	95			
resistance to:				
inorganic acids	++	+++ = excellent ++ = good		
organic acids	+++			
alkalines	++			
oxidising agents	+	+ = fair		
solvents	++	- = not recommended		
vegetable/animal oils	+++			
micro-organisms	+++			

6. Order code

Example
